NT-C-026 | AWS Cloud | Course Knowledge Profile

Identity, purpose, prerequisites, scope and boundaries

Category	Cloud
Target learners	Learners targeting AWS support, administration and junior cloud roles.
Prerequisites	Basic networking and operating-system knowledge.
Approved duration	12-16 weeks / 140-180 guided hours.
Final outcome	Deploy, secure, monitor and document a reliable application environment on AWS.
Assessment profile	Infrastructure/Security

Approved tools / platforms

AWS IAM, VPC, EC2, S3, RDS, Elastic Load Balancing, Auto Scaling, Lambda and CloudWatch.

Knowledge boundaries

Include	Quality rule	Exclude / escalate
The eight approved modules, four sections, named tools, projects and mapped entry-level roles.	Require least privilege, authorised labs, configuration evidence, logs, monitoring, rollback and documented troubleshooting.	Never recommend unsafe production testing or treat a scanner output as a verified finding without validation.
Current product/platform procedures only when version and date are known.	Use primary documentation and record the source version.	Do not invent current commands, prices, tax rates, policies or certification status.
Evidence-based career guidance.	Cite tests, projects, capstone, viva and verified resume evidence.	No guaranteed job, placement, salary, interview or employer claim.

LLM answer pattern: identify the course and version, answer from approved records, cite record IDs, distinguish verified facts from guidance, and state any missing evidence.

NT-C-026 | AWS Cloud | NT-C-026-S01 Deep Knowledge

Modules 1-2 | objectives, concepts, evidence and remediation

Section competency	Regions, availability zones, shared responsibility and pricing; IAM users, roles, policies and least privilege
Completion evidence	Architecture note; Access lab
Section weight	20% of the weighted mock-test average
Assessment	10 MCQ (30 marks) + 4 troubleshooting scenarios (30) + 1 authorised practical lab (40)

Module 1 - Cloud foundation

Objective: Regions, availability zones, shared responsibility and pricing
Observable evidence: Architecture note

Concept	Approved knowledge statement	Application behaviour	Evidence
Regions	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when regions is appropriate; apply it in a AWS Cloud task; verify the result.	Architecture note
availability zones	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when availability zones is appropriate; apply it in a AWS Cloud task; verify the result.	Architecture note
shared responsibility	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when shared responsibility is appropriate; apply it in a AWS Cloud task; verify the result.	Architecture note
pricing	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when pricing is appropriate; apply it in a AWS Cloud task; verify the result.	Architecture note

Module 2 - Identity

Objective: IAM users, roles, policies and least privilege
Observable evidence: Access lab

Concept	Approved knowledge statement	Application behaviour	Evidence
IAM users	Identity and access management based on users, roles, policies and least privilege. In AWS Cloud, it must be demonstrated through an observable task, not only recalled as a definition.	Explain when iam users is appropriate; apply it in a AWS Cloud task; verify the result.	Access lab
roles	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when roles is appropriate; apply it in a AWS Cloud task; verify the result.	Access lab
policies	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when policies is appropriate; apply it in a AWS Cloud task; verify the result.	Access lab
least privilege	Granting only the minimum access required for an approved task. In AWS Cloud, it must be demonstrated through an observable task, not only recalled as a definition.	Explain when least privilege is appropriate; apply it in a AWS Cloud task; verify the result.	Access lab

Remediation: If the learner cannot explain the purpose, complete the stated task or provide Architecture note; Access lab, return to Modules 1-2, complete one guided practice and then use a new equivalent test form.

NT-C-026 | AWS Cloud | NT-C-026-S02 Deep Knowledge

Modules 3-4 | objectives, concepts, evidence and remediation

Section competency	EC2, EBS, S3 and lifecycle; VPC, subnets, routing, security groups and DNS
Completion evidence	Hosted workload; Network design
Section weight	25% of the weighted mock-test average
Assessment	10 MCQ (30 marks) + 4 troubleshooting scenarios (30) + 1 authorised practical lab (40)

Module 3 - Compute and storage

Objective: EC2, EBS, S3 and lifecycle
Observable evidence: Hosted workload

Concept	Approved knowledge statement	Application behaviour	Evidence
EC2	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when ec2 is appropriate; apply it in a AWS Cloud task; verify the result.	Hosted workload
EBS	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when ebs is appropriate; apply it in a AWS Cloud task; verify the result.	Hosted workload
S3	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when s3 is appropriate; apply it in a AWS Cloud task; verify the result.	Hosted workload
lifecycle	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when lifecycle is appropriate; apply it in a AWS Cloud task; verify the result.	Hosted workload

Module 4 - Networking

Objective: VPC, subnets, routing, security groups and DNS
Observable evidence: Network design

Concept	Approved knowledge statement	Application behaviour	Evidence
VPC	An isolated logical cloud network. In AWS Cloud, it must be demonstrated through an observable task, not only recalled as a definition.	Explain when vpc is appropriate; apply it in a AWS Cloud task; verify the result.	Network design
subnets	A logical subdivision of an ip network. In AWS Cloud, it must be demonstrated through an observable task, not only recalled as a definition.	Explain when subnets is appropriate; apply it in a AWS Cloud task; verify the result.	Network design
routing	Selection and forwarding of network paths between destinations. In AWS Cloud, it must be demonstrated through an observable task, not only recalled as a definition.	Explain when routing is appropriate; apply it in a AWS Cloud task; verify the result.	Network design
security groups	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when security groups is appropriate; apply it in a AWS Cloud task; verify the result.	Network design
DNS	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when dns is appropriate; apply it in a AWS Cloud task; verify the result.	Network design

Remediation: If the learner cannot explain the purpose, complete the stated task or provide Hosted workload; Network design, return to Modules 3-4, complete one guided practice and then use a new equivalent test form.

NT-C-026 | AWS Cloud | NT-C-026-S03 Deep Knowledge

Modules 5-6 | objectives, concepts, evidence and remediation

Section competency	RDS and managed data choices; Load balancing, Auto Scaling and backups
Completion evidence	Database lab; Resilient design
Section weight	25% of the weighted mock-test average
Assessment	10 MCQ (30 marks) + 4 troubleshooting scenarios (30) + 1 authorised practical lab (40)

Module 5 - Databases

Objective: RDS and managed data choices
Observable evidence: Database lab

Concept	Approved knowledge statement	Application behaviour	Evidence
RDS	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when rds is appropriate; apply it in a AWS Cloud task; verify the result.	Database lab
managed data choices	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when managed data choices is appropriate; apply it in a AWS Cloud task; verify the result.	Database lab

Module 6 - Availability

Objective: Load balancing, Auto Scaling and backups
Observable evidence: Resilient design

Concept	Approved knowledge statement	Application behaviour	Evidence
Load balancing	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when load balancing is appropriate; apply it in a AWS Cloud task; verify the result.	Resilient design
Auto Scaling	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when auto scaling is appropriate; apply it in a AWS Cloud task; verify the result.	Resilient design
backups	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when backups is appropriate; apply it in a AWS Cloud task; verify the result.	Resilient design

Remediation: If the learner cannot explain the purpose, complete the stated task or provide Database lab; Resilient design, return to Modules 5-6, complete one guided practice and then use a new equivalent test form.

NT-C-026 | AWS Cloud | NT-C-026-S04 Deep Knowledge

Modules 7-8 | objectives, concepts, evidence and remediation

Section competency	Lambda, events and API basics; CloudWatch, security, cost and documentation
Completion evidence	Serverless function; Monitored AWS environment
Section weight	30% of the weighted mock-test average
Assessment	10 MCQ (30 marks) + 4 troubleshooting scenarios (30) + 1 authorised practical lab (40)

Module 7 - Serverless

Objective: Lambda, events and API basics
Observable evidence: Serverless function

Concept	Approved knowledge statement	Application behaviour	Evidence
Lambda	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when lambda is appropriate; apply it in a AWS Cloud task; verify the result.	Serverless function
events	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when events is appropriate; apply it in a AWS Cloud task; verify the result.	Serverless function
API basics	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when api basics is appropriate; apply it in a AWS Cloud task; verify the result.	Serverless function

Module 8 - Operations capstone

Objective: CloudWatch, security, cost and documentation
Observable evidence: Monitored AWS environment

Concept	Approved knowledge statement	Application behaviour	Evidence
CloudWatch	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when cloudwatch is appropriate; apply it in a AWS Cloud task; verify the result.	Monitored AWS environment
security	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when security is appropriate; apply it in a AWS Cloud task; verify the result.	Monitored AWS environment
cost	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when cost is appropriate; apply it in a AWS Cloud task; verify the result.	Monitored AWS environment
documentation	A defined competency within AWS Cloud. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.	Explain when documentation is appropriate; apply it in a AWS Cloud task; verify the result.	Monitored AWS environment

Remediation: If the learner cannot explain the purpose, complete the stated task or provide Serverless function; Monitored AWS environment, return to Modules 7-8, complete one guided practice and then use a new equivalent test form.

NT-C-026 | AWS Cloud | Skill Ontology & Dependency Map

Atomic skills, learning order and evidence strength

Skill ID	Competency	Depends on	Evidence	Type
NT-C-026-SK01	Cloud foundation	Prerequisite foundation	Architecture note	Critical
NT-C-026-SK02	Identity	M01 plus earlier foundations	Access lab	Critical
NT-C-026-SK03	Compute and storage	M02 plus earlier foundations	Hosted workload	Supporting
NT-C-026-SK04	Networking	M03 plus earlier foundations	Network design	Supporting
NT-C-026-SK05	Databases	M04 plus earlier foundations	Database lab	Supporting
NT-C-026-SK06	Availability	M05 plus earlier foundations	Resilient design	Critical
NT-C-026-SK07	Serverless	M06 plus earlier foundations	Serverless function	Supporting
NT-C-026-SK08	Operations capstone	M07 plus earlier foundations	Monitored AWS environment	Critical

Evidence-strength hierarchy

Strength	Evidence source	Use
High	Trainer-observed practical, viva, working source/project files and reproducible output.	May support verified mastery when rubric threshold is met.
Medium	Scored mock tests, reviewed assignments and documented portfolio artifacts.	Supports mastery with corroboration.
Low	Resume claim, self-report, attendance or video completion without demonstration.	May trigger verification; cannot alone support Apply Now.

CareerTours must not treat attendance, time spent or content opened as skill mastery.

NT-C-026 | AWS Cloud | Assessment Knowledge & Sample Items

Non-live examples for LLM training and evaluation

Sample ID	Type	Question	Approved answer / rubric anchor
NT-C-026-S01-EX01	Evidence/application	What evidence best demonstrates the combined competency of Cloud foundation and Identity?	The learner should provide Architecture note; Access lab and explain how the work applies Regions, availability zones, shared responsibility and pricing; IAM users, roles, policies and least privilege. Recall alone is insufficient.
NT-C-026-S01-EX02	Scenario/remediation	A learner reports completing Identity but cannot produce Access lab. What should CareerTours do?	Mark the evidence Not Yet Verified, assign practice from NT-C-026-S01, request Access lab, and allow a new equivalent test only after remediation.
NT-C-026-S02-EX01	Evidence/application	What evidence best demonstrates the combined competency of Compute and storage and Networking?	The learner should provide Hosted workload; Network design and explain how the work applies EC2, EBS, S3 and lifecycle; VPC, subnets, routing, security groups and DNS. Recall alone is insufficient.
NT-C-026-S02-EX02	Scenario/remediation	A learner reports completing Networking but cannot produce Network design. What should CareerTours do?	Mark the evidence Not Yet Verified, assign practice from NT-C-026-S02, request Network design, and allow a new equivalent test only after remediation.
NT-C-026-S03-EX01	Evidence/application	What evidence best demonstrates the combined competency of Databases and Availability?	The learner should provide Database lab; Resilient design and explain how the work applies RDS and managed data choices; Load balancing, Auto Scaling and backups. Recall alone is insufficient.
NT-C-026-S03-EX02	Scenario/remediation	A learner reports completing Availability but cannot produce Resilient design. What should CareerTours do?	Mark the evidence Not Yet Verified, assign practice from NT-C-026-S03, request Resilient design, and allow a new equivalent test only after remediation.
NT-C-026-S04-EX01	Evidence/application	What evidence best demonstrates the combined competency of Serverless and Operations capstone?	The learner should provide Serverless function; Monitored AWS environment and explain how the work applies Lambda, events and API basics; CloudWatch, security, cost and documentation. Recall alone is insufficient.
NT-C-026-S04-EX02	Scenario/remediation	A learner reports completing Operations capstone but cannot produce Monitored AWS environment. What should CareerTours do?	Mark the evidence Not Yet Verified, assign practice from NT-C-026-S04, request Monitored AWS environment, and allow a new equivalent test only after remediation.

Live bank rule: Generate at least three times the live quantity for each section using the approved Infrastructure/Security blueprint. Human-review every scored item before initial production release.

NT-C-026 | AWS Cloud | Labs, Projects & Scoring Rubrics

Practical proof of learning and ownership

Level	Approved project	Skills evidenced	Required deliverables
Mini 1	Static/compute hosting	S3 or EC2 and IAM	Brief; working/source file or reproducible environment; output; validation notes; reflection.
Mini 2	Resilient web tier	VPC, load balancer and scaling	Brief; working/source file or reproducible environment; output; validation notes; reflection.
Capstone	Cloud operations environment	Security, monitoring and cost controls	Brief; working/source file or reproducible environment; output; validation notes; reflection.

Standard project rubric

Dimension	Weight	What earns credit
Problem framing	15%	Clear objective, user/business need, assumptions and success criteria.
Technical/design accuracy	25%	Correct methods, appropriate tools and sound decisions.
Completeness	15%	Required features, assets, data or workflow are present.
Testing and validation	15%	Important normal, edge, quality or failure cases are checked.
Evidence and reproducibility	15%	Source/working files, setup, inputs, outputs and version information are available.
Documentation	5%	Concise structure, instructions and limitations.
Viva / ownership	10%	Learner can explain decisions, demonstrate work and respond to a change request.

Require least privilege, authorised labs, configuration evidence, logs, monitoring, rollback and documented troubleshooting.

NT-C-026 | AWS Cloud | Career Roles, Evidence & Gap Actions

Explainable top-three occupation matching

Rank	Occupation	Default weighted skills	Minimum evidence	Gap action
1	AWS Cloud Support Associate	AWS core 34% [critical]; Linux 33% [critical]; networking 33%	Troubleshooting labs	If a critical skill is below 60 or troubleshooting labs is missing, return Improve First or Needs Evidence with the linked module/project.
2	Cloud Operations Trainee	Monitoring 34% [critical]; backup 33% [critical]; security 33%	Operations runbook	If a critical skill is below 60 or operations runbook is missing, return Improve First or Needs Evidence with the linked module/project.
3	Junior Cloud Engineer - AWS	Architecture 50% [critical]; deployment 50% [critical]	Cloud capstone	If a critical skill is below 60 or cloud capstone is missing, return Improve First or Needs Evidence with the linked module/project.

Course readiness	45% section mocks + 20% mini projects + 25% capstone + 10% viva.
Role readiness	45% role-relevant mastery + 25% projects/capstone + 20% aligned mocks + 10% verified resume evidence.
Evidence confidence	Show separately; Apply Now requires at least 70.
Resume extraction	Use only relevant skills, projects, education, experience and portfolio evidence; minimise personal data before external model processing.

A student may be Apply Now for one mapped occupation and Improve First for another. Return independent evidence and gaps for each role.

NT-C-026 | AWS Cloud | FAQs, Misconceptions & LLM Response Pack

Course-specific retrieval and response patterns

Approved FAQ	Answer
Who is AWS Cloud for?	Learners targeting AWS support, administration and junior cloud roles.
What should I know before starting?	Basic networking and operating-system knowledge.
How long is the approved learning journey?	12-16 weeks / 140-180 guided hours.
What will I be able to demonstrate?	Deploy, secure, monitor and document a reliable application environment on AWS.
Does completion guarantee a job?	No. Completion and role readiness are evidence-based guidance; employment, placement, salary and employer selection are not guaranteed.
What if I fail a section?	CareerTours identifies the failed skill tags and module, assigns targeted practice, and permits an equivalent retest after remediation.

Misconception	Approved correction
Attendance proves mastery	False - require tests and observable practical/project evidence.
One total score proves every role fit	False - calculate each occupation using its weighted skills and evidence.
The LLM can add missing details	False - retrieve approved records or state that evidence is insufficient.
Course completion guarantees employment	False - never claim guaranteed job, placement, salary or interview.
AWS Cloud knowledge never changes	False - version-sensitive tools, laws, taxes, security and platform procedures require review.
