

## NT-C-040 | ServiceNow | Course Knowledge Profile

Identity, purpose, prerequisites, scope and boundaries

|                           |                                                                                                                        |
|---------------------------|------------------------------------------------------------------------------------------------------------------------|
| <b>Category</b>           | Enterprise Platforms & ITSM                                                                                            |
| <b>Target learners</b>    | Learners targeting ServiceNow administration, ITSM support and junior platform roles.                                  |
| <b>Prerequisites</b>      | Basic IT service-management and web concepts are helpful.                                                              |
| <b>Approved duration</b>  | 14-18 weeks / 160-220 guided hours.                                                                                    |
| <b>Final outcome</b>      | Configure and support a ServiceNow application using data, roles, ITSM workflows, automation and controlled scripting. |
| <b>Assessment profile</b> | Programming/Platform                                                                                                   |

### Approved tools / platforms

ServiceNow Personal Developer Instance or authorised training instance, Flow Designer, reports, scripting and REST API tools.

### Knowledge boundaries

| Include                                                                                        | Quality rule                                                                                                | Exclude / escalate                                                                   |
|------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| The eight approved modules, four sections, named tools, projects and mapped entry-level roles. | Prefer runnable or demonstrable outputs, clear input validation, error handling, tests and version control. | Do not treat copied code or syntax recall as proof of implementation skill.          |
| Current product/platform procedures only when version and date are known.                      | Use primary documentation and record the source version.                                                    | Do not invent current commands, prices, tax rates, policies or certification status. |
| Evidence-based career guidance.                                                                | Cite tests, projects, capstone, viva and verified resume evidence.                                          | No guaranteed job, placement, salary, interview or employer claim.                   |

LLM answer pattern: identify the course and version, answer from approved records, cite record IDs, distinguish verified facts from guidance, and state any missing evidence.

## NT-C-040 | ServiceNow | NT-C-040-S01 Deep Knowledge

Modules 1-2 | objectives, concepts, evidence and remediation

|                            |                                                                                   |
|----------------------------|-----------------------------------------------------------------------------------|
| <b>Section competency</b>  | Navigation, instances, tables and records; Users, groups, roles and ACL concepts  |
| <b>Completion evidence</b> | Configured practice app; Access model                                             |
| <b>Section weight</b>      | 20% of the weighted mock-test average                                             |
| <b>Assessment</b>          | 10 concept MCQ (30 marks) + 4 code/design scenarios (30) + 2 practical tasks (40) |

### Module 1 - Platform foundation

Objective: Navigation, instances, tables and records

Observable evidence: Configured practice app

| Concept    | Approved knowledge statement                                                                                                                                             | Application behaviour                                                                     | Evidence                |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|-------------------------|
| Navigation | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when navigation is appropriate; apply it in a ServiceNow task; verify the result. | Configured practice app |
| instances  | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when instances is appropriate; apply it in a ServiceNow task; verify the result.  | Configured practice app |
| tables     | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when tables is appropriate; apply it in a ServiceNow task; verify the result.     | Configured practice app |
| records    | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when records is appropriate; apply it in a ServiceNow task; verify the result.    | Configured practice app |

### Module 2 - Users and access

Objective: Users, groups, roles and ACL concepts

Observable evidence: Access model

| Concept      | Approved knowledge statement                                                                                                                                             | Application behaviour                                                                       | Evidence     |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|--------------|
| Users        | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when users is appropriate; apply it in a ServiceNow task; verify the result.        | Access model |
| groups       | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when groups is appropriate; apply it in a ServiceNow task; verify the result.       | Access model |
| roles        | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when roles is appropriate; apply it in a ServiceNow task; verify the result.        | Access model |
| ACL concepts | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when acl concepts is appropriate; apply it in a ServiceNow task; verify the result. | Access model |

Remediation: If the learner cannot explain the purpose, complete the stated task or provide Configured practice app; Access model, return to Modules 1-2, complete one guided practice and then use a new equivalent test form.

## NT-C-040 | ServiceNow | NT-C-040-S02 Deep Knowledge

Modules 3-4 | objectives, concepts, evidence and remediation

|                            |                                                                                              |
|----------------------------|----------------------------------------------------------------------------------------------|
| <b>Section competency</b>  | Fields, views, UI policies and data quality; Incident, request, problem and change workflows |
| <b>Completion evidence</b> | Configured interface; ITSM case                                                              |
| <b>Section weight</b>      | 25% of the weighted mock-test average                                                        |
| <b>Assessment</b>          | 10 concept MCQ (30 marks) + 4 code/design scenarios (30) + 2 practical tasks (40)            |

### Module 3 - Forms and lists

Objective: Fields, views, UI policies and data quality

Observable evidence: Configured interface

| Concept      | Approved knowledge statement                                                                                                                                             | Application behaviour                                                                       | Evidence             |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|----------------------|
| Fields       | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when fields is appropriate; apply it in a ServiceNow task; verify the result.       | Configured interface |
| views        | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when views is appropriate; apply it in a ServiceNow task; verify the result.        | Configured interface |
| UI policies  | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when ui policies is appropriate; apply it in a ServiceNow task; verify the result.  | Configured interface |
| data quality | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when data quality is appropriate; apply it in a ServiceNow task; verify the result. | Configured interface |

### Module 4 - ITSM processes

Objective: Incident, request, problem and change workflows

Observable evidence: ITSM case

| Concept          | Approved knowledge statement                                                                                                                                             | Application behaviour                                                                           | Evidence  |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|-----------|
| Incident         | An unplanned interruption or reduction in service quality. In ServiceNow, it must be demonstrated through an observable task, not only recalled as a definition.         | Explain when incident is appropriate; apply it in a ServiceNow task; verify the result.         | ITSM case |
| request          | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when request is appropriate; apply it in a ServiceNow task; verify the result.          | ITSM case |
| problem          | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when problem is appropriate; apply it in a ServiceNow task; verify the result.          | ITSM case |
| change workflows | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when change workflows is appropriate; apply it in a ServiceNow task; verify the result. | ITSM case |

Remediation: If the learner cannot explain the purpose, complete the stated task or provide Configured interface; ITSM case, return to Modules 3-4, complete one guided practice and then use a new equivalent test form.

## NT-C-040 | ServiceNow | NT-C-040-S03 Deep Knowledge

Modules 5-6 | objectives, concepts, evidence and remediation

|                            |                                                                                                       |
|----------------------------|-------------------------------------------------------------------------------------------------------|
| <b>Section competency</b>  | Flow Designer, approvals, notifications and SLAs; Reports, dashboards, metrics and service visibility |
| <b>Completion evidence</b> | Automated workflow; Service dashboard                                                                 |
| <b>Section weight</b>      | 25% of the weighted mock-test average                                                                 |
| <b>Assessment</b>          | 10 concept MCQ (30 marks) + 4 code/design scenarios (30) + 2 practical tasks (40)                     |

### Module 5 - Automation

Objective: Flow Designer, approvals, notifications and SLAs

Observable evidence: Automated workflow

| Concept       | Approved knowledge statement                                                                                                                                                          | Application behaviour                                                                        | Evidence           |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|--------------------|
| Flow Designer | ServiceNow's low-code environment for triggers, actions and approval workflows. In ServiceNow, it must be demonstrated through an observable task, not only recalled as a definition. | Explain when flow designer is appropriate; apply it in a ServiceNow task; verify the result. | Automated workflow |
| approvals     | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.              | Explain when approvals is appropriate; apply it in a ServiceNow task; verify the result.     | Automated workflow |
| notifications | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.              | Explain when notifications is appropriate; apply it in a ServiceNow task; verify the result. | Automated workflow |
| SLAs          | A defined service commitment measured using agreed conditions and calendars. In ServiceNow, it must be demonstrated through an observable task, not only recalled as a definition.    | Explain when slas is appropriate; apply it in a ServiceNow task; verify the result.          | Automated workflow |

### Module 6 - Reporting

Objective: Reports, dashboards, metrics and service visibility

Observable evidence: Service dashboard

| Concept            | Approved knowledge statement                                                                                                                                             | Application behaviour                                                                             | Evidence          |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|-------------------|
| Reports            | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when reports is appropriate; apply it in a ServiceNow task; verify the result.            | Service dashboard |
| dashboards         | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when dashboards is appropriate; apply it in a ServiceNow task; verify the result.         | Service dashboard |
| metrics            | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when metrics is appropriate; apply it in a ServiceNow task; verify the result.            | Service dashboard |
| service visibility | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when service visibility is appropriate; apply it in a ServiceNow task; verify the result. | Service dashboard |

Remediation: If the learner cannot explain the purpose, complete the stated task or provide Automated workflow; Service dashboard, return to Modules 5-6, complete one guided practice and then use a new equivalent test form.

## NT-C-040 | ServiceNow | NT-C-040-S04 Deep Knowledge

Modules 7-8 | objectives, concepts, evidence and remediation

|                            |                                                                                                     |
|----------------------------|-----------------------------------------------------------------------------------------------------|
| <b>Section competency</b>  | Client/server concepts, APIs and update discipline; Security, testing, deployment and documentation |
| <b>Completion evidence</b> | Scripted feature; ServiceNow solution                                                               |
| <b>Section weight</b>      | 30% of the weighted mock-test average                                                               |
| <b>Assessment</b>          | 10 concept MCQ (30 marks) + 4 code/design scenarios (30) + 2 practical tasks (40)                   |

### Module 7 - Scripting and integration

Objective: Client/server concepts, APIs and update discipline

Observable evidence: Scripted feature

| Concept                | Approved knowledge statement                                                                                                                                             | Application behaviour                                                                                 | Evidence         |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|------------------|
| Client/server concepts | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when client/server concepts is appropriate; apply it in a ServiceNow task; verify the result. | Scripted feature |
| APIs                   | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when apis is appropriate; apply it in a ServiceNow task; verify the result.                   | Scripted feature |
| update discipline      | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence. | Explain when update discipline is appropriate; apply it in a ServiceNow task; verify the result.      | Scripted feature |

### Module 8 - Capstone

Objective: Security, testing, deployment and documentation

Observable evidence: ServiceNow solution

| Concept       | Approved knowledge statement                                                                                                                                                                      | Application behaviour                                                                        | Evidence            |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|---------------------|
| Security      | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.                          | Explain when security is appropriate; apply it in a ServiceNow task; verify the result.      | ServiceNow solution |
| testing       | Systematic verification that expected behaviour and important failure cases work correctly. In ServiceNow, it must be demonstrated through an observable task, not only recalled as a definition. | Explain when testing is appropriate; apply it in a ServiceNow task; verify the result.       | ServiceNow solution |
| deployment    | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.                          | Explain when deployment is appropriate; apply it in a ServiceNow task; verify the result.    | ServiceNow solution |
| documentation | A defined competency within ServiceNow. The learner must explain its purpose, apply it in an appropriate scenario, verify the result and produce the specified evidence.                          | Explain when documentation is appropriate; apply it in a ServiceNow task; verify the result. | ServiceNow solution |

Remediation: If the learner cannot explain the purpose, complete the stated task or provide Scripted feature; ServiceNow solution, return to Modules 7-8, complete one guided practice and then use a new equivalent test form.

## NT-C-040 | ServiceNow | Skill Ontology & Dependency Map

Atomic skills, learning order and evidence strength

| Skill ID      | Competency                | Depends on                   | Evidence                | Type       |
|---------------|---------------------------|------------------------------|-------------------------|------------|
| NT-C-040-SK01 | Platform foundation       | Prerequisite foundation      | Configured practice app | Critical   |
| NT-C-040-SK02 | Users and access          | M01 plus earlier foundations | Access model            | Critical   |
| NT-C-040-SK03 | Forms and lists           | M02 plus earlier foundations | Configured interface    | Supporting |
| NT-C-040-SK04 | ITSM processes            | M03 plus earlier foundations | ITSM case               | Supporting |
| NT-C-040-SK05 | Automation                | M04 plus earlier foundations | Automated workflow      | Supporting |
| NT-C-040-SK06 | Reporting                 | M05 plus earlier foundations | Service dashboard       | Critical   |
| NT-C-040-SK07 | Scripting and integration | M06 plus earlier foundations | Scripted feature        | Supporting |
| NT-C-040-SK08 | Capstone                  | M07 plus earlier foundations | ServiceNow solution     | Critical   |

### Evidence-strength hierarchy

| Strength | Evidence source                                                                         | Use                                                        |
|----------|-----------------------------------------------------------------------------------------|------------------------------------------------------------|
| High     | Trainer-observed practical, viva, working source/project files and reproducible output. | May support verified mastery when rubric threshold is met. |
| Medium   | Scored mock tests, reviewed assignments and documented portfolio artifacts.             | Supports mastery with corroboration.                       |
| Low      | Resume claim, self-report, attendance or video completion without demonstration.        | May trigger verification; cannot alone support Apply Now.  |

CareerTours must not treat attendance, time spent or content opened as skill mastery.

## NT-C-040 | ServiceNow | Assessment Knowledge & Sample Items

Non-live examples for LLM training and evaluation

| Sample ID         | Type                 | Question                                                                                                   | Approved answer / rubric anchor                                                                                                                                                                                                        |
|-------------------|----------------------|------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NT-C-040-S01-EX01 | Evidence/application | What evidence best demonstrates the combined competency of Platform foundation and Users and access?       | The learner should provide Configured practice app; Access model and explain how the work applies Navigation, instances, tables and records; Users, groups, roles and ACL concepts. Recall alone is insufficient.                      |
| NT-C-040-S01-EX02 | Scenario/remediation | A learner reports completing Users and access but cannot produce Access model. What should CareerTours do? | Mark the evidence Not Yet Verified, assign practice from NT-C-040-S01, request Access model, and allow a new equivalent test only after remediation.                                                                                   |
| NT-C-040-S02-EX01 | Evidence/application | What evidence best demonstrates the combined competency of Forms and lists and ITSM processes?             | The learner should provide Configured interface; ITSM case and explain how the work applies Fields, views, UI policies and data quality; Incident, request, problem and change workflows. Recall alone is insufficient.                |
| NT-C-040-S02-EX02 | Scenario/remediation | A learner reports completing ITSM processes but cannot produce ITSM case. What should CareerTours do?      | Mark the evidence Not Yet Verified, assign practice from NT-C-040-S02, request ITSM case, and allow a new equivalent test only after remediation.                                                                                      |
| NT-C-040-S03-EX01 | Evidence/application | What evidence best demonstrates the combined competency of Automation and Reporting?                       | The learner should provide Automated workflow; Service dashboard and explain how the work applies Flow Designer, approvals, notifications and SLAs; Reports, dashboards, metrics and service visibility. Recall alone is insufficient. |
| NT-C-040-S03-EX02 | Scenario/remediation | A learner reports completing Reporting but cannot produce Service dashboard. What should CareerTours do?   | Mark the evidence Not Yet Verified, assign practice from NT-C-040-S03, request Service dashboard, and allow a new equivalent test only after remediation.                                                                              |
| NT-C-040-S04-EX01 | Evidence/application | What evidence best demonstrates the combined competency of Scripting and integration and Capstone?         | The learner should provide Scripted feature; ServiceNow solution and explain how the work applies Client/server concepts, APIs and update discipline; Security, testing, deployment and documentation. Recall alone is insufficient.   |
| NT-C-040-S04-EX02 | Scenario/remediation | A learner reports completing Capstone but cannot produce ServiceNow solution. What should CareerTours do?  | Mark the evidence Not Yet Verified, assign practice from NT-C-040-S04, request ServiceNow solution, and allow a new equivalent test only after remediation.                                                                            |

Live bank rule: Generate at least three times the live quantity for each section using the approved Programming/Platform blueprint. Human-review every scored item before initial production release.

## NT-C-040 | ServiceNow | Labs, Projects & Scoring Rubrics

Practical proof of learning and ownership

| Level    | Approved project           | Skills evidenced                             | Required deliverables                                                                         |
|----------|----------------------------|----------------------------------------------|-----------------------------------------------------------------------------------------------|
| Mini 1   | Incident workflow          | Forms, roles and SLA                         | Brief; working/source file or reproducible environment; output; validation notes; reflection. |
| Mini 2   | Service request automation | Flow and approvals                           | Brief; working/source file or reproducible environment; output; validation notes; reflection. |
| Capstone | ITSM service application   | Security, reports, testing and documentation | Brief; working/source file or reproducible environment; output; validation notes; reflection. |

### Standard project rubric

| Dimension                    | Weight | What earns credit                                                                   |
|------------------------------|--------|-------------------------------------------------------------------------------------|
| Problem framing              | 15%    | Clear objective, user/business need, assumptions and success criteria.              |
| Technical/design accuracy    | 25%    | Correct methods, appropriate tools and sound decisions.                             |
| Completeness                 | 15%    | Required features, assets, data or workflow are present.                            |
| Testing and validation       | 15%    | Important normal, edge, quality or failure cases are checked.                       |
| Evidence and reproducibility | 15%    | Source/working files, setup, inputs, outputs and version information are available. |
| Documentation                | 5%     | Concise structure, instructions and limitations.                                    |
| Viva / ownership             | 10%    | Learner can explain decisions, demonstrate work and respond to a change request.    |

Prefer runnable or demonstrable outputs, clear input validation, error handling, tests and version control.

## NT-C-040 | ServiceNow | Career Roles, Evidence & Gap Actions

Explainable top-three occupation matching

| Rank | Occupation                       | Default weighted skills                                             | Minimum evidence       | Gap action                                                                                                                                   |
|------|----------------------------------|---------------------------------------------------------------------|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | ServiceNow Administrator Trainee | Tables 25% [critical]; forms 25% [critical]; roles 25%; reports 25% | Configured application | If a critical skill is below 60 or configured application is missing, return Improve First or Needs Evidence with the linked module/project. |
| 2    | ITSM Support Analyst             | Incident/request process 50% [critical]; SLAs 50% [critical]        | ITSM case              | If a critical skill is below 60 or itsm case is missing, return Improve First or Needs Evidence with the linked module/project.              |
| 3    | Junior ServiceNow Developer      | Flow 34% [critical]; scripting 33% [critical]; APIs 33%             | Platform capstone      | If a critical skill is below 60 or platform capstone is missing, return Improve First or Needs Evidence with the linked module/project.      |

|                            |                                                                                                                                            |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Course readiness</b>    | 45% section mocks + 20% mini projects + 25% capstone + 10% viva.                                                                           |
| <b>Role readiness</b>      | 45% role-relevant mastery + 25% projects/capstone + 20% aligned mocks + 10% verified resume evidence.                                      |
| <b>Evidence confidence</b> | Show separately; Apply Now requires at least 70.                                                                                           |
| <b>Resume extraction</b>   | Use only relevant skills, projects, education, experience and portfolio evidence; minimise personal data before external model processing. |

A student may be Apply Now for one mapped occupation and Improve First for another. Return independent evidence and gaps for each role.

NT-C-040 | ServiceNow | FAQs, Misconceptions & LLM Response Pack

Course-specific retrieval and response patterns

| Approved FAQ                               | Answer                                                                                                                                  |
|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| Who is ServiceNow for?                     | Learners targeting ServiceNow administration, ITSM support and junior platform roles.                                                   |
| What should I know before starting?        | Basic IT service-management and web concepts are helpful.                                                                               |
| How long is the approved learning journey? | 14-18 weeks / 160-220 guided hours.                                                                                                     |
| What will I be able to demonstrate?        | Configure and support a ServiceNow application using data, roles, ITSM workflows, automation and controlled scripting.                  |
| Does completion guarantee a job?           | No. Completion and role readiness are evidence-based guidance; employment, placement, salary and employer selection are not guaranteed. |
| What if I fail a section?                  | CareerTours identifies the failed skill tags and module, assigns targeted practice, and permits an equivalent retest after remediation. |

| Misconception                           | Approved correction                                                                            |
|-----------------------------------------|------------------------------------------------------------------------------------------------|
| Attendance proves mastery               | False - require tests and observable practical/project evidence.                               |
| One total score proves every role fit   | False - calculate each occupation using its weighted skills and evidence.                      |
| The LLM can add missing details         | False - retrieve approved records or state that evidence is insufficient.                      |
| Course completion guarantees employment | False - never claim guaranteed job, placement, salary or interview.                            |
| ServiceNow knowledge never changes      | False - version-sensitive tools, laws, taxes, security and platform procedures require review. |
